#### Question1 :

Write code and connections in wokwi for ultrasonic sensor. Whenever distance is less than 100 cms send "alert" to ibm cloud and display in device recent events.

OUTPUT:

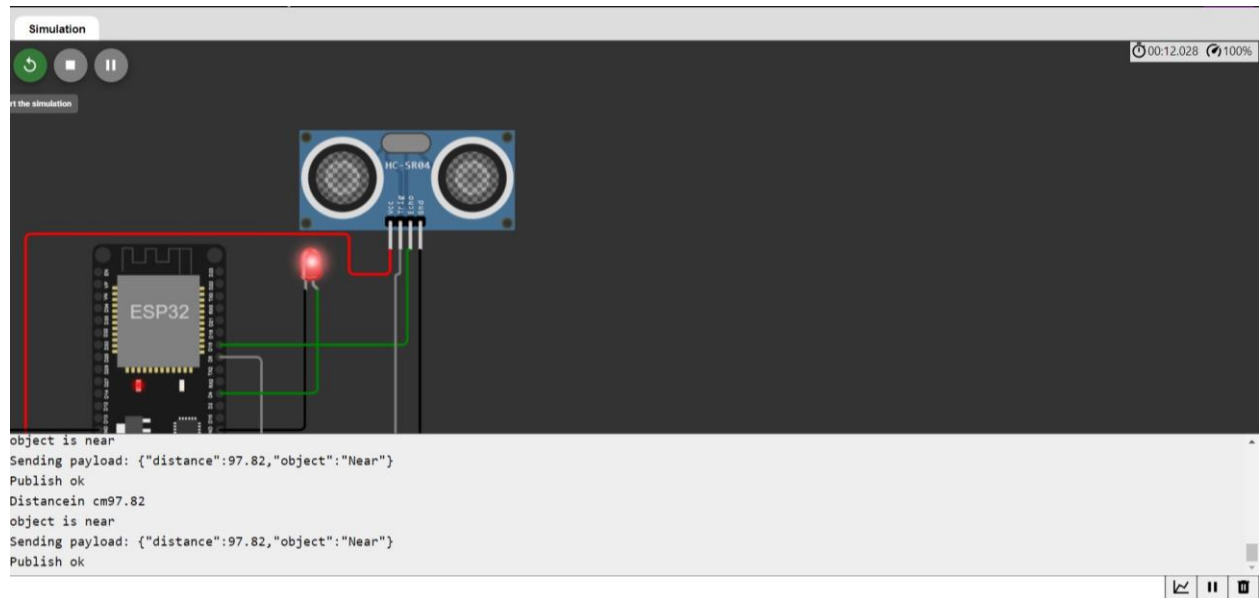

Data send to the IBM cloud device when the object is far

The screenshot shows the IBM IoT Platform console. The 'Recent Events' tab is selected, displaying a table of events received from the device 'DISTANCEDETECT'. The table has four columns: Event, Value, Format, and Last Received. The events are as follows:

| Event | Value                             | Format | Last Received     |
|-------|-----------------------------------|--------|-------------------|
| Data  | {"distance":141.21,"object":"No"} | json   | a few seconds ago |
| Data  | {"distance":141.21,"object":"No"} | json   | a few seconds ago |
| Data  | {"distance":141.21,"object":"No"} | json   | a few seconds ago |
| Data  | {"distance":141.18,"object":"No"} | json   | a few seconds ago |
| Data  | {"distance":141.2,"object":"No"}  | json   | a few seconds ago |

At the bottom of the console, it shows 'Items per page 50' and '1 of 1 page'.
